

HATALOGIX

Catalog Online Suites

BERKHAN SYSTEMS
INTERNATIONAL PTE LTD - SINGAPORE

• systems for all. all for systems. •

Overview

In addition to providing convenience to users, Katalogix is also providing ease of use for library officials to conduct cataloging activities. This is a technological development in library science and it can be used for a variety of purposes.

There are a number of installed catalog systems out there that can be accessed by the public and where users can browse through catalog information (to determine whether a particular work is held at the library, to obtain information about its location, and if the catalog system is linked to the circulation system, the user can find out whether the library material being searched for is available in the library or on loan).

- Detection and reading of visitor RFID tags
- With the help of the keyboard / screen keyboard, you can fill in data
- There is a database server index that catalogs the data in the data search index
- Announcements/messages from the Library may be sent to you in the form of feedback
- Incorporating RFID into other RFID systems within the library

Features

Searching Capabilities

Be it simple or advanced search, Katalogix has it all. Whether it is a boolean search, phrase search, or truncation, Katalogix enhances the search capabilities. Browsing search by author, title, subject, and type of publication is also provided.

User Assistance

On their search interfaces, they provide the user with on-screen assistance. Instructional help is always provided. The catalogs not only list the items the library has, but also indicate whether they are currently checked out or available right away

Search Limit

The search limit is a crucial component of a successful and meaningful search. By specifying the publication year and its kind, the Katalogix makes this information available. The ability to sort papers by author, title, and structure is another feature.

Search Strategy

With the help of this function, it is possible to create a search statement that will efficiently find more relevant information in a shorter length of time. The user can employ a variety of strategy tools available in the Katalogix.

Easy To Use

Katalogix is an interactive and user-friendly information system. You can access it at any time and from any location thanks to its connection to a document-searching circulation system. It provides rapid access points for searching material by author, title, etc.
